INF 22

The Problem

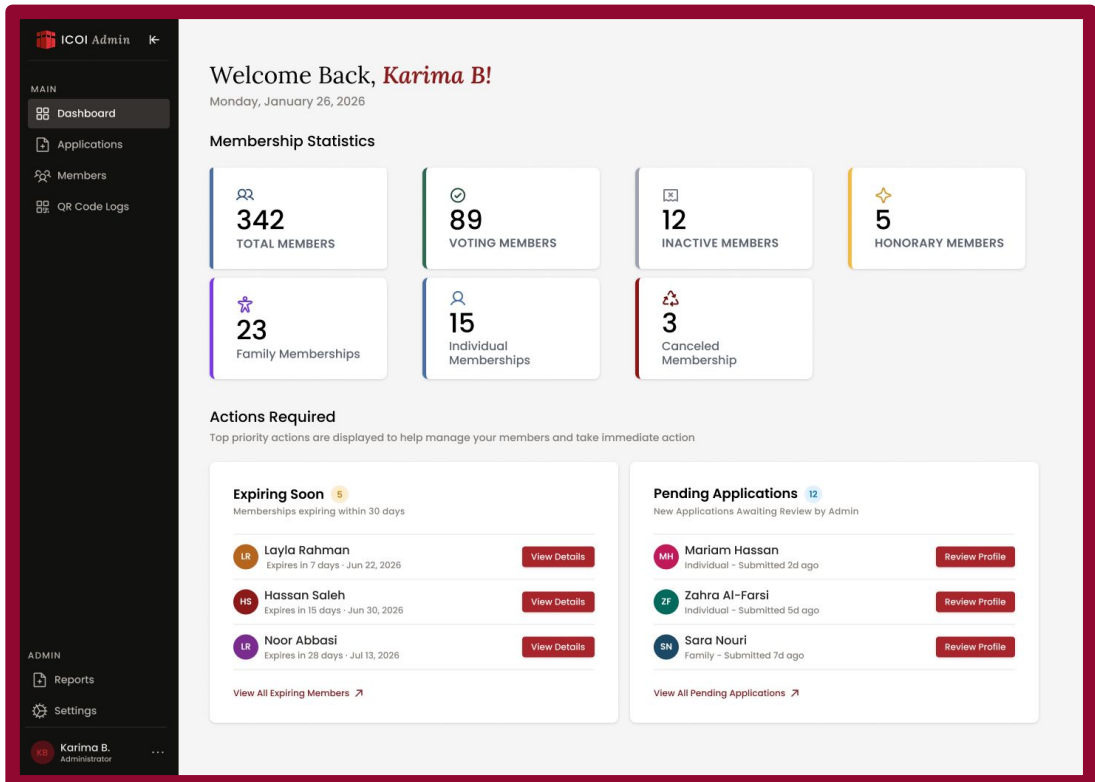

The Islamic Center of Irvine manages 500+ members using Google Forms and Sheets. This manual process has no audit trail, no automatic status tracking, and no way to verify members at events.

Our Solution

A centralized membership platform that automates status transitions based on ICOI's bylaws, verifies members through QR code scanning, and logs every administrative action with field-level detail.

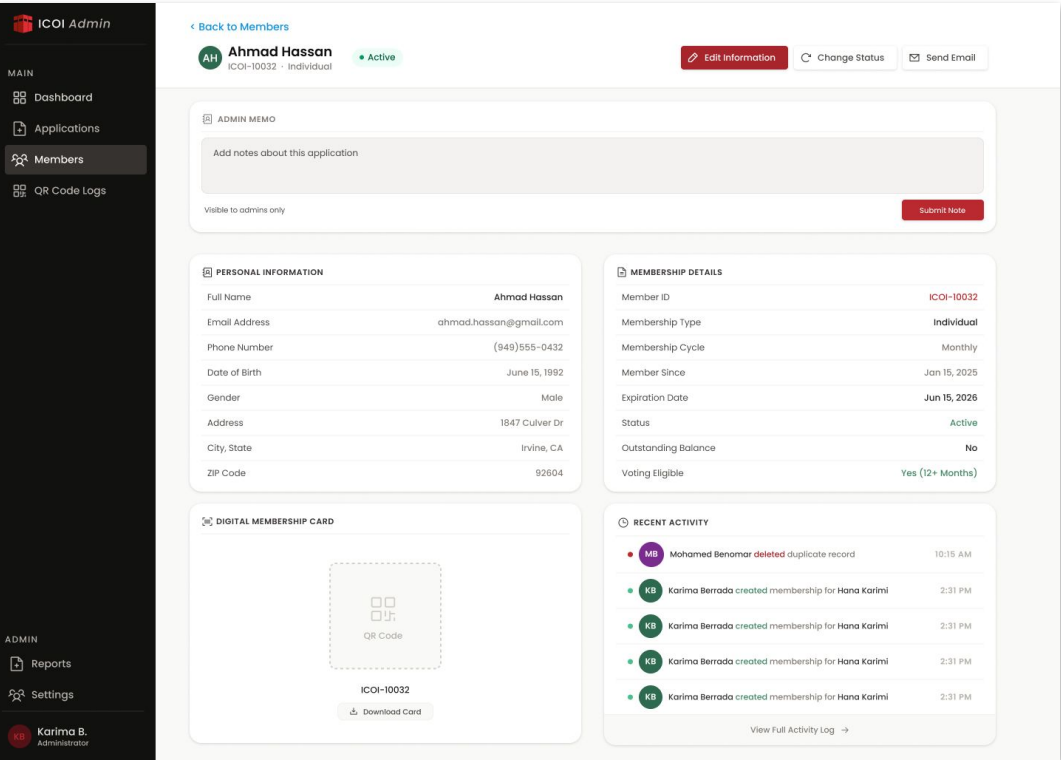

How it Works

A day in the life of ICOI staff using our system

1. Check Membership statistics

Admin logs in and sees active members, pending applications, and upcoming renewals at a glance.

2. View Member Details

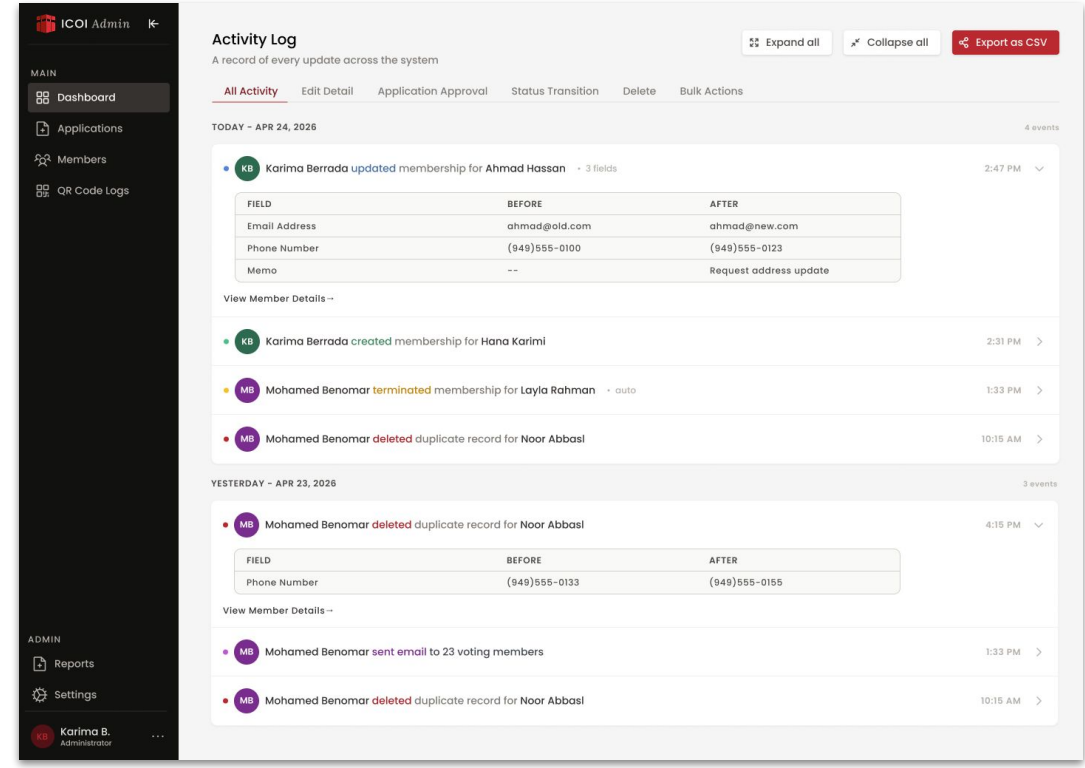

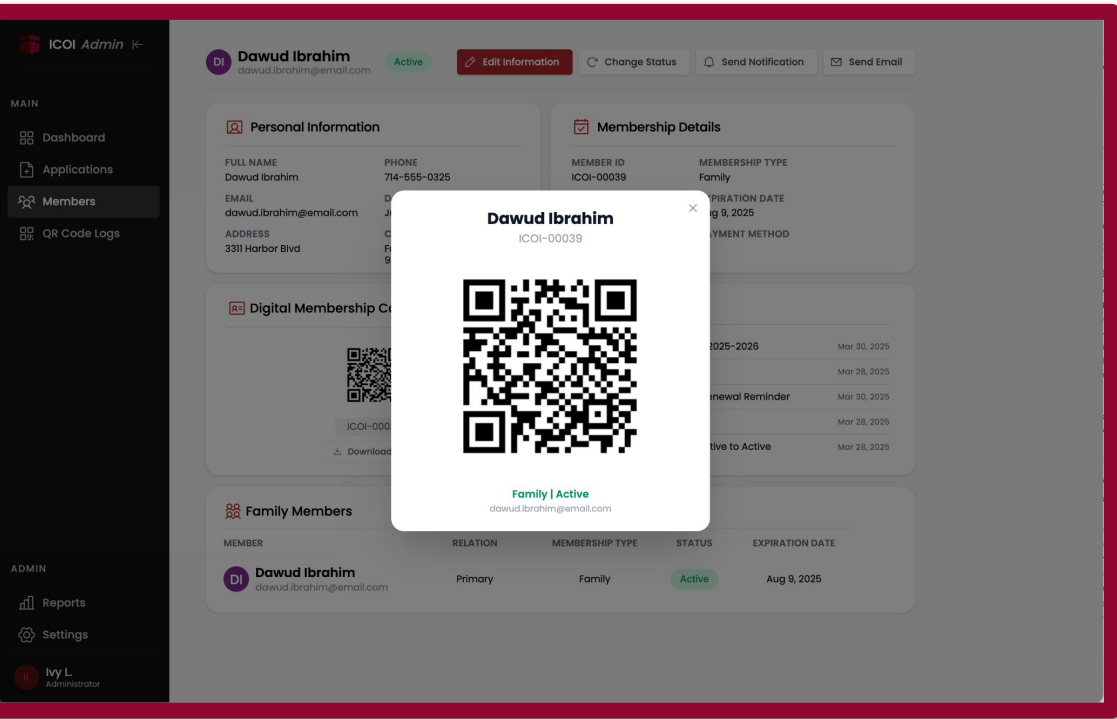

Admin finds a member, updates their status. The system automatically logs the change with a timestamp.

3. Verify Members at Events

A volunteer scans a member's unique QR code to instantly confirm their membership, replacing paper sign-in sheets.

4. Full Audit of Admin Actions

Every action is logged with field-level detail. Leadership can see who changed what and when.

Our Process

01. Met weekly with ICOI to understand bylaws and member workflows
02. Designed hi-fi prototypes in Figma, iterated on partner feedback
03. Built in 2-week sprints with continuous deployment
04. Shared working builds with ICOI each sprint for feedback

Impact

- Replaced manual process for 500+ member nonprofit
- Automated status tracking based on actual bylaws
- QR verification replaces paper rosters
- Full audit logging for accountability

Built with Figma, React, Tailwind CSS, Spring Boot, PostgreSQL | Deployed on Vercel + Railway
