

LATTE LEARN

TEAM ESPRESSO

LIKELION US 2024-25

a focus companion app that brings the café study experience home

THE FLOWS

THE LO-FI

THE CAFÉ

OVERVIEW

One cycle. Nine people. One café.

My role

Project Manager & Design Lead: planning, timeline, and UX/UI from user flows to hi-fi Figma prototype

Team

Team Espresso, 9 members: 2 PM · 2 design · 2 frontend · 4 backend (overlapping roles)

Timeline

January – May 2025, one academic cycle on the LikeLion project track

Stack

Figma · React + Electron desktop app · Python/Flask API

My focus

Keeping a mixed-experience team shipping: scoping, design critique cycles, design-to-dev alignment

THE PROBLEM

ca·gong·jok (카공족) · noun

Korean slang for people who study in cafés. The café gives them what home can't: ambient noise, warm atmosphere, and a sense of gentle accountability.

What cafés give

Cozy ambiance, background hum, and warm interiors that make focus feel effortless.

What cafés cost

Noise you can't control, hunting for outlets, travel time, and a growing coffee bill.

The question

Can we combine the comfort of home with the atmosphere and focus of a café?

WHO WE DESIGNED FOR

Two kinds of café people.

Students & test preppers

Need focus during exam season

Prefer libraries or cafés but feel the cost and access burden

Study long-term for certifications and entrance exams

Take more classes online, so home must work as a study space

Remote workers & freelancers

Work from home (25–40) and struggle to manage focus

Want café-like background sound to get into flow

Need time management and productivity structure

Use evenings for self-development and extra learning

COMPETITIVE ANALYSIS

The gap on the menu.

Five focus tools, four dimensions our users cared about. No single product combined them all. That gap became LatteLearn.

	<i>LatteLearn</i>	Cold Turkey	Virtual Cottage	I Miss The Office	LifeAt	Pomofocus
Ambiance	●	·	●	●	●	·
Pomodoro	●	·	●	·	●	●
Tasks	●	·	·	·	●	●
Analytics	●	·	·	·	·	●

Full matrix with all six dimensions and platform support in the original research file.

THE SOLUTION

Your own café at home.

A study companion that recreates the focus of sitting in a café, minus everything that breaks it.

Minimal by design

essential features only · the interface never competes with studying

Pomodoro timer

structured focus sessions · intuitive one-glance controls

Café ambiance

background soundscapes · the café atmosphere at home

Task management

goal setting · a to-do system built for study sessions

Study analytics

personal focus patterns · data that suggests how to study smarter

PROCESS

How we got there.

01

Concept

MONTHS 1-2

Brainstormed around everyday-life change; locked the “digital café study space” concept. Set the design direction: style guide, typography, and the warm café-inspired UI language.

02

Design & Prototype

MONTHS 3-4

Mapped user flows for tasks, timer, customization, and music. Prototyped Lo-Fi to Mid-Fi in Figma while devs learned the stack in parallel, and core timer/task logic began.

03

Build & Integrate

MONTHS 4-5

Split ownership by feature for depth over breadth. Finalized UI through repeated design critiques, integrated frontend and backend, and packaged with Electron.

Flows before screens.

Four user flows (tasks, timer, customization, music) mapped first, so the interface followed how studying actually happens.

DESIGN

From lo-fi to the café.

LO-FI WIREFRAMES

function first, no personality yet

FIGMA PROTOTYPE

*a pixel-art café · the espresso machine is the timer ·
the interface is the atmosphere*

All the things we learned.

As PM

Nine people, mixed experience, one academic cycle: shipping meant cutting features early and often. Every scope cut that hurt in week 6 is the reason we had a packaged app in week 16.

As designer

The café metaphor only worked because we mapped flows before drawing screens. Personality came last, on top of structure, never instead of it.

Next

Account sync, mobile, and shared study rooms: the café is better with friends at the next table.
